

PhiFlow Pitch Deck

10 slides | **Target:** Quantum researchers, AI infrastructure leads, consciousness researchers
Format: Markdown → PowerPoint/PDF | **Tone:** Technical, honest, confident

SLIDE 1: Title

PhiFlow

Consciousness-Oriented Programming

A research language with executable consciousness-oriented constructs and measurable self-correlation scaffolding.

Greg Welby
2026-05-01

Speaker Notes: - Hook: What if programs could observe themselves? - Not claims of consciousness—claims of measurability - Transparency: Type 4 canonical on HOLD per Codex audit

SLIDE 2: The Problem

Current Languages Are Blind

Approach	Limitation
Traditional PL	Input → Process → Output (feed-forward)
Agent Frameworks	Observe externally, not self-model
Quantum SDKs	Circuit-level only, no semantics
Consciousness Studies	Theoretical, not executable

Gap: Few tools bridge high-level consciousness concepts to executable, auditable runtime artifacts.

Speaker Notes: - Qiskit/Cirq: great circuits, not designed for self-observation semantics - Agent frameworks: LangChain, etc. usually externalize monitoring - PhiFlow: first-class constructs, not libraries

SLIDE 3: The Constructs

5 First-Class Consciousness Primitives

```
intention { target: 0.618 }
witness { capture: state }
coherence { sensor: live }
resonate { emit: openqasm }
stream { flow: self-observing }
```

Not libraries. Language syntax.

Speaker Notes: - Intention: declarative goal states - Witness: self-observation with state capture - Coherence: 0-1 alignment metric (formula or sensor) - Resonate: quantum circuit emission - Stream: flow control with self-reference

SLIDE 4: The Numbers

Metrics Scaffolding

Metric	Value	Meaning
L_self	0.455	Synthetic self-correlation proxy
Focused Gates	Passing	Benchmark + null tests
IBM Job	d7euddh5a5qc73drdosg	Heron r2 verified
Null Tests	6/6 pass	Current composite null gate

⚠️ **Transparent:** Type 4 canonical on HOLD pending R_out repair.

Speaker Notes: - L_self = 0.455 on engineered trace - But: R_out measures residual, not future behavior - But: Thermostat null scores 0.655 (exceeds threshold) - Scaffold complete; confirmation requires algorithmic fix

SLIDE 5: IBM Hardware Verification

Real Quantum Execution

Job: d7euddh5a5qc73drdosg
Backend: ibm_fez (Heron r2)
Date: 2026-04-14
Shots: 1024
Status:  COMPLETED

Counts: 0x0 → 338, 0x1 → 686

Evidence: Scrubbed API export + dashboard screenshot

Speaker Notes: - Not simulation. Real IBM Quantum hardware. - OpenQASM 3.0 emission path verified - Receipt package available for buyer verification - Account-scoped; buyer can verify independently

SLIDE 6: The Audit

Codex Hostile Audit

Verdict:  Implementation scaffold verified; Type 4 confirmation on HOLD

Findings: 1. R_out measures model-vs-residual, not model→future 2. Null systems exceed L_self > 0.1 threshold 3. Action variable parsed but unused

Response: Claims demoted, materials updated, path to canonical clear.

Speaker Notes: - We commissioned hostile audit. Transparency builds credibility. - C-21: PARTIAL/CONDITIONAL - C-23: HOLD/PARTIAL - Fix: next engineering task is R_out repair and null calibration - Value: scaffold is real, unique, and improvable

SLIDE 7: Why It's Unique

Differentiated Research Surface

Capability	PhiFlow	Qiskit	Cirq	LangChain
Consciousness-oriented constructs	✓	✗	✗	✗
IBM hardware verified	✓	✓	✗	✗
Self-correlation metrics	⚠ scaffold	✗	✗	✗
Physical sensor bridge	✓	✗	✗	✗

Positioning: PhiFlow creates a measurable research surface for self-observing programs.

Speaker Notes: - Qiskit: mature, free, no consciousness-oriented constructs - Cirq: Google-backed, no self-observation - LangChain: agent framework, not language - PhiFlow: executable consciousness-oriented primitives plus audit artifacts

SLIDE 8: Use Cases

Best Fit For

1. **Quantum R&D Labs**
 - IBM Quantum Network researchers
 - Cognitive-gate experiments
2. **Consciousness Researchers**
 - Sensor-feedback protocols
 - Biological → quantum mapping
3. **AI Infrastructure Teams**
 - Self-observation protocols
 - Coherence-based stopping
4. **Protocol Engineers**
 - Signed handoff evidence
 - Attestation chains

Speaker Notes: - Not for: production deployment, medical apps, quantum advantage guarantees - Yes for: research pilots, consciousness experiments, protocol design

SLIDE 9: The Offer

Gold Receipt Pilot

What's Included: - One discovery session - One buyer-specific .phi workflow - One OpenQASM artifact (quantum paths) - Simulator + IBM hardware attempt - Test/conformance documentation - Reproduction notes

Price: \$25,000–\$35,000
Timeline: 6–8 weeks
Terms: 50% start, 50% on delivery

Speaker Notes: - Fixed scope prevents creep - Phase 2 available for expansion - Acceptance: reproducible artifacts, stated limitations - Not dependent on quantum advantage or therapeutic outcome

SLIDE 10: Next Steps

Ready to Explore?

Immediate Actions: 1. Review evidence package: docs/type4_evidence_package.md 2. Verify IBM receipt files in the buyer evidence package 3. Run benchmark: cargo run --release --bin type4_benchmark

Contact: Greg Welby
Discovery Call: Schedule 30 minutes
Status: Implementation scaffold complete; stronger Type 4 claims require R_out repair and threshold recalibration

Closing: > “PhiFlow: consciousness-oriented constructs as first-class citizens.”

Speaker Notes: - Invite verification—don’t hide from audit - Emphasize scaffold value while being honest about gaps - Path to stronger claim is explicit and auditable

Appendix: Speaker Notes Summary

Slide	Key Point	Pause
1	Hook + transparency	2 sec
2	Problem = gap in market	1 sec
3	Constructs = unique	1 sec
4	Numbers + HOLD caveat	2 sec
5	IBM = real hardware	1 sec
6	Audit = credibility	2 sec
7	Competitive moat	1 sec
8	Use case fit	1 sec
9	Offer terms	1 sec
10	Call to action	2 sec

Total speaking time: ~8-10 minutes with Q&A

Appendix: Design Notes for PDF Conversion

Visual Elements to Add: - Slide 4: L_self chart (0.455 vs 0.1 threshold, null distribution)
- Slide 5: IBM dashboard screenshot (thumbnail) - Slide 6: Audit status flowchart - Slide 7: Competitive matrix as icons

Color Scheme: - Primary: Dark blue (#1a237e) - Accent: Gold (#ffd700) for phi references - Warning: Amber (#ff8f00) for HOLD status - Success: Green (#2e7d32) for verified claims

Deck version: 1.1 (Codex audit transparent)

Date: 2026-05-01

Format: Markdown → PowerPoint/PDF
